

Survey Questions

Project: Color Psychology Study in UI/UX Design

The following survey is designed to understand users' opinions about colors in digital interfaces. Responses can help identify how color choices affect usability, emotions, accessibility, and overall user experience.

- 1. What is your age group?**
- 2. How often do you use mobile applications or websites?**
- 3. Which color do you associate most with trust? Why?**
- 4. Which UI color attracts your attention the most?**
- 5. Which color do you prefer for action buttons (e.g., Submit, Login, Buy Now)?**
- 6. Do bright colors improve your browsing experience? Explain briefly.**
- 7. Do you use Dark Mode or Light Mode more frequently?**
- 8. Have you ever stopped using an app because its color scheme was uncomfortable?**
- 9. Which color combinations are easiest for you to read?**
- 10. Are there any colors that make text difficult to read?**
- 11. How important is color consistency across an application?**
- 12. Which brands do you think use colors effectively in their UI?**
- 13. Do colors influence your online purchasing decisions?**

14. How important is accessibility (contrast, color blindness support) in app design?

15. What suggestions would you give for improving color usage in mobile or web applications?
